DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1, 3, 4, and 9 to 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Law (3,173,814).

The Law reference teaches a method for depositing a doped germanium layer. A substrate is placed in a deposition chamber. The chamber is heated to deposition temperatures. Source gases of germanium and the dopant are flowed into the chamber. The result is a doped layer of epitaxially grown germanium. The dopants can be arsenic, boron, phosphorus and antimony, note col. 3. The source gases are halides of the metal atoms being deposited on the substrate, note col. 4. The sole difference

between the instant claims and the prior art is the amount of dopant. However, in the absence of unexpected results, it would have been obvious to one of ordinary skill in the art to determine the optimum, operable dopant amounts in the Law reference in order to obtain the desired properties as the reference clearly sets forth dopant amounts can be varied and such varying will effect the properties of the germanium.

Claims 2, and 5 to 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Law (3,173,814).

The Law reference is relied on for the same reasons as stated, supra, and differs from the instant claims in the thickness and substrate type. However, in the absence of unexpected results, it would have been obvious to one of ordinary skill in the art to determine the optimum, operable thickness of germanium grown and substrate type in the Law reference in order to create the desired device.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert M Kunemund whose telephone number is 571-272-1464. The examiner can normally be reached on 8 hours.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nadine Norton can be reached on 571-272-1465. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
